Professional Bodybuilding With Deca Durabolin

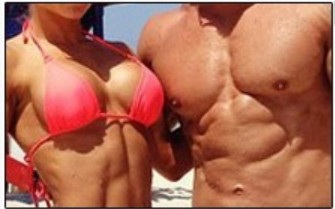

Deca Durabolin or Nandrolone Decanoate is the world's most popular anabolic androgenic steroid for strength athletics and professional bodybuilding.

DecaDurabolin (Nandrolone Decanoate) is also admired for its unique ability to improve red blood cell production and bone density levels. This performance enhancing drug is regarded by thousands of amateur and professional athletes and bodybuilders as the perfect bodybuilding steroid to experience dramatic muscle growth and strength gains.

This steroid may be prescribed during the treatment of individuals diagnosed with debilitating health conditions such as anemia, osteoporosis, and some forms of neoplasia including breast cancer. This steroid has the anabolic/androgenic ratio of 125:37 and the chemical name of 19-nor-androst-4-en-3-one-17beta-ol. Considered as an ideal drug before professional bodybuilding contest or the off-season, Deca Durabolin has an oral bioavailability of 2.24 percent and has the molecular weight of 428.65 g/mol at the base.

10					250 mg every week
11				50 mg every day	250 mg every week
12				50 mg every day	250 mg every week

One of the safest and most effective injectable steroids, Deca Durabolin is a lesser potent agonist of the androgen receptor compared to Testosterone. Deca Durabolin has the ability to bind far more successfully than Testosterone for the androgen receptor in muscle tissue and use of this steroid is not linked to bad lipid profiles or high levels of bad cholesterol.
